

Ceremo Inner Bag Instructions

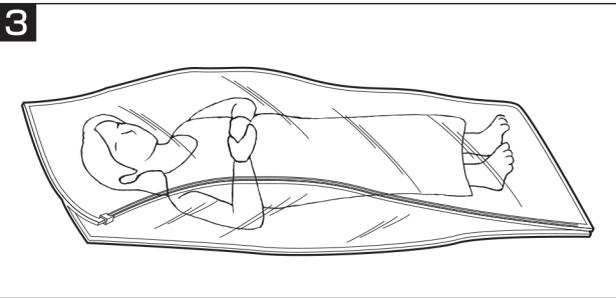

Storage of the body

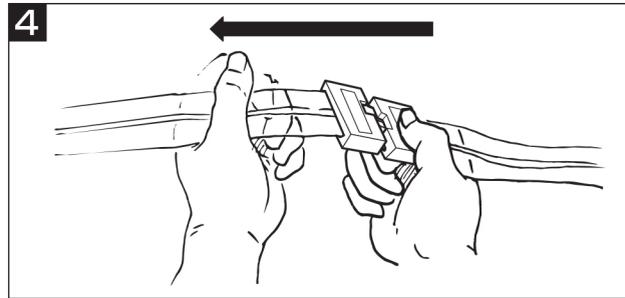

Spread the inner bag open with the zipper on top. There are 2 sliders on the sides of the bag.

Pull the bag open with both hands.

Place the body face up in the bag.

Move the sliders together. Once the sliders have docked, move them left and right a few inches to completely seal the bag. Should reopening the bag become necessary, open as in step 2.

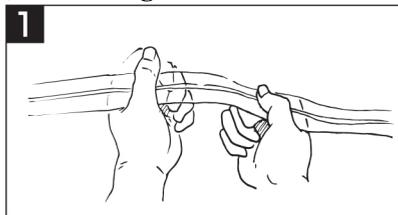

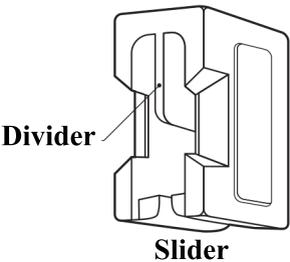

Caution

Wipe off any putrefaction liquids which may be present on the bag. These liquids on the outside of the bag will cause odors. Do not use dry ice. If the bag expands with air, open it and let the air out. Do not drag or otherwise scratch or puncture the bag, as it may cause damage.

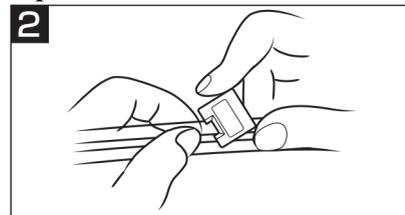

Should the sliders come off

If for any reason the sliders come off, please follow the procedures below to reattach.

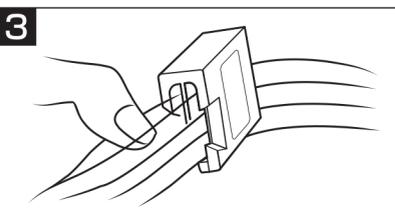

If the bag is properly sealed, not having the sliders will not affect performance.

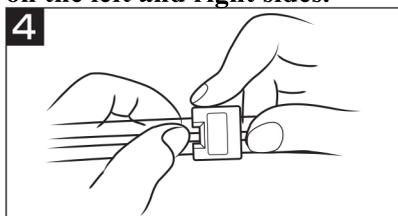

Align the rails of the opening on the left and right sides.

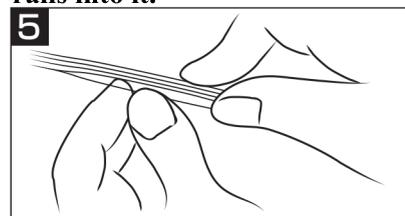

Tilt the slider, and insert the rails into it.

When the rails are partway inserted, with the divider between them, press down diagonally and continue pressing downwards.

Once the slider has clamped down on the rails, push it downwards, until it snaps into place.

Ensure the slider is firmly in place and sliding smoothly.
